

Dante 2ch USB I/O adaptor

DESCRIPTION

The ALF-DAIO-USB USB to Dante I/O adapter is a complete high-performance Dante device with the automation and ease-of-use features that make Dante the world's most popular audio networking solution. The Dante I/O Adapter is compatible with all Dante interfaces and provides all the features you would expect from a Dante audio network. Each adapter is capable of providing high-fidelity audio reproduction, ultra-low latency, and sample-accurate synchronization across the entire network.

FEATURES

- No need to install software to connect any computer to the Dante audio network, and you can use any audio application to play or record your device.
- It is an ideal choice for meeting rooms and presentation activities. In the meeting room system configuration, it is easy to create audio connection points for laptop, without the need to reconfigure your Dante network on another computer.
- It is possible to simultaneously record and play dual-channel audio on any computer system, without the need for any additional software.
